

Project Proposal No - 1

Software Engineering

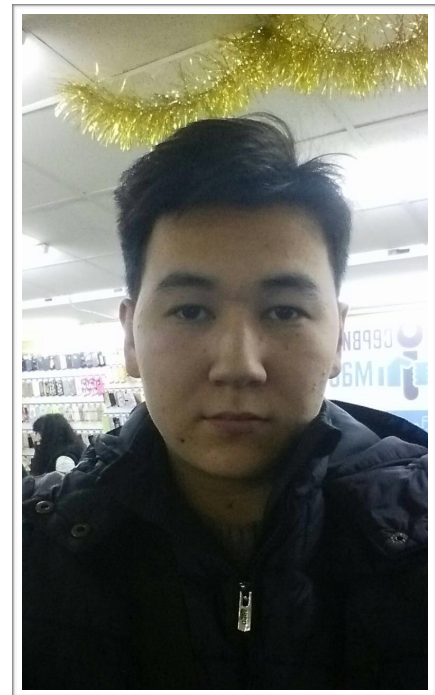

Full information about the Team:

- team name:

Soft-Force

- members:

- 1) Khamit Berik - 13649
- 2) Abai Zhardem - 12247
- 3) Askar Baibossynov - 12274
- 4) Abilkaiyr Doszhanov - 13288

- name of the project:

SDU Student House Portal

- description:

This is the simple portal. Where dormitory administration can register every student who lives in the student house. The advantages are all the info about the students are available all the time from the server. Also they can see payment and so on. Audience are students and dorm administration.

- language, platforms:

This is gonna be WEB Application written in Java(Play Frmwrk). Database probably we going to use MySQL. IDE: IntelliJ or Eclipse.

- complexity:

This is actually the real system. And as we know to write some system is not easy, even if it has the simplest functionality. One of the functionalities or innovation in the dormitory we want add something like «Key List». Different people in the dormitory every time takes the rooms keys, that can be stuff or students. And Receptioner all the time writes it down, who took the key. In our system will be the list and you can choose certain people names and register that key to him. And when he/she give it back just remove the check. No need to write and remove it in the paper, waste time and other resources.

- customer:

- Customer is SDU Dormitory administration. And exactly Director of Student House: Erganat Zhashikh
tel no: 8 778 7071086
