Description of the project

The project is about SDU Student House System which is like university portal but focused on the registration and control students in the dormitory. As users will be Student House Administration stuff and students. All the users will access their profile by ID or EMAIL. Admin stuff will have possibilities to add the student and all information about him/her. Also assistant students can add whether student got bed-set and did he/she submitted all registration documents. Any time if dormitory administration wishes to see all the private information about the particular student, they can just write his name in the search bar and access all the datas.

USE - CASES

Administration:

- Add students
- Control payment
- Control whether students got needed stuff

(room, bed-set, meal card etc.)

Students:

- See personal datas

Screen #1

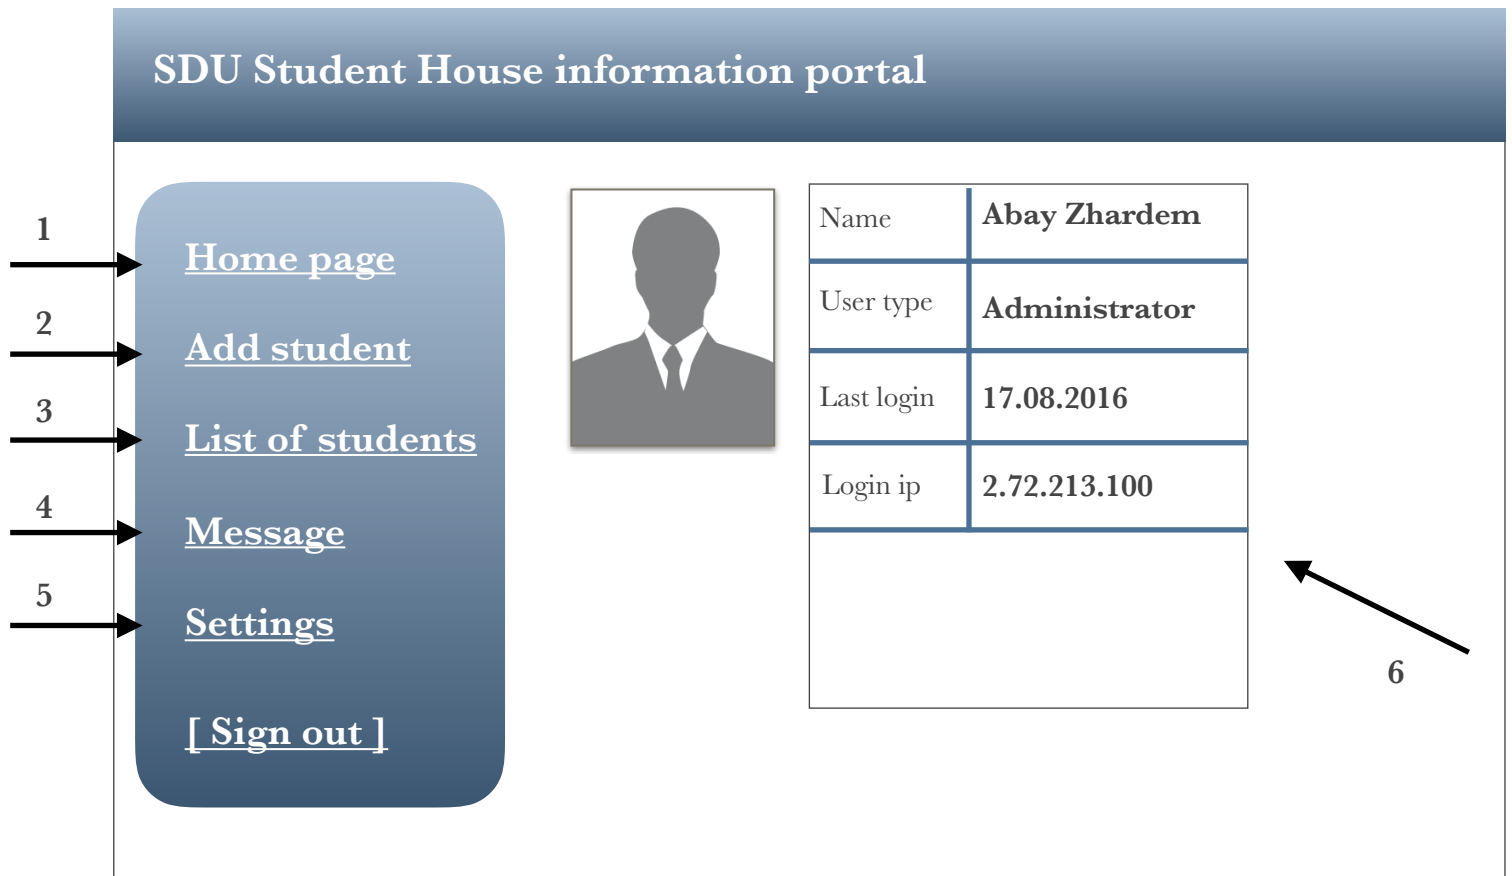

1. Email field. It is used to identify the user.
2. Password field.
3. Login button to enter the system. We don't have any Registration button because all registration of the students and other users executing by admin account.
4. This link is for if user can't access his/her account. System just sends a password to the email.

Screen #2

If user is logged in as an admin. **First Page**

1. 'Home page' button. This is first page which is showed on the screen.
2. 'Add student' button. This is another page. Where admin can add the student.
3. In 'Student list' admin have access to all students existing on the database, and there admin can drop student.
4. 'Message' is beautiful opportunity to notify students to their emails.
5. 'Settings'. In the setting user can change name, password and set profile photo as well.
6. Table with little information about current user.

Screen #3 Add Student page
